

Mandatory information to be published under the Regulation (EU) No. 2019/2088 ("SFDR")

The company APF DIGITAL AGRIFUND CR s.r.o., ID No.: 142 65 681, with its registered office at: Pražákova 1008/69, Štýřice, 639 00 Brno, Czech Republic (hereinafter the "**Company**") hereby from the position of a financial market participant – asset manager comparable to asset management pursuant to Section 15 of Act No. 240/2013 Coll., on investment firms and investment funds (alternative fund manager), hereby informs, in accordance with Regulation (EU) 2019/2088 of the European Parliament and of the Council of 27 November 2019 on sustainability-related disclosures in the financial services sector (hereinafter the "**SFDR**"), about the consideration of adverse sustainability impacts and the integration of sustainability risks into their practices and the provision of other sustainability-related information within the meaning of the SFDR.

In particular, the SFDR aims to increase transparency towards investors, especially with regard to environmental and social sustainability.

Sustainable investments

A sustainable investment is an investment in an economic activity that contributes to environmental objectives, such as investments measured, for example, by key resource efficiency indicators on energy use, renewable energy, raw materials, water and land, waste production, greenhouse gas emissions, or indicators on its impact on biodiversity and the circular economy, or an investment in an economic activity that contributes to social objectives, in particular an investment that contributes to addressing inequalities, or investments that promote social cohesion, social integration and labour relations, or investments in human capital or economically or socially disadvantaged communities, provided that such investments do not significantly undermine any of these objectives and that the investee companies comply with good governance practices, in particular as regards sound management structures, employee relations, remuneration of relevant employees and compliance with tax rules.

Factors of sustainability

Factors of sustainability include environmental, social and labour issues, respect for human rights and anti-corruption and anti-bribery issues.

Failure to take into account adverse impacts of investment decisions on the factors of sustainability

The Company hereby informs investors that it does not currently consider the adverse impact of investment decisions on the factors of sustainability. This is because, given the types of assets that are acquired into the alternative fund and the investment objectives, consideration of the adverse impact of investment decisions on factors of sustainability is not currently considered relevant.

In the future, the Company does not rule out taking into account the adverse impact of investment decisions on factors of sustainability in the provision of services. The Company will

monitor this area and review at least annually whether there has been any change to the above.

Failure to incorporate sustainability risks

Sustainability risks, i.e., adverse events in the area of environmental and social sustainability, as well as other risks faced by the Company in its operations, may have a negative impact on the Company and, consequently, on investors.

Sustainability risks mainly include environmental (greenhouse gas emissions and related global warming, energy-intensive lifestyles, waste pollution) and social issues (gender discrimination, human rights, child labour, worker health, etc.).

The Company hereby informs investors that **it does not currently incorporate** sustainability risks into investment decisions, given the size of the Company as an alternative fund manager, the size of the alternative fund itself and the investment strategy of the alternative fund.

The Company does not rule out taking these factors into account in the provision of services in the future. The Company will monitor this area and review at least annually whether there has been any change in the above.

Remuneration principles with regard to the integration of sustainability risks

The Company applies other key remuneration policies and principles that are set in line with sector regulation and which are sustainable for the Company in the long term. While the policies do not include sustainability as a key risk mitigation criterion, they are not set in a way that would encourage adverse sustainability impacts from investment decisions.

The underlying investments of this financial product do not take into account EU criteria for environmentally sustainable economic activities.
